

Reviewing Literature:

Canadian adolescent perceptions and knowledge about the social determinants of health: an observational study of Kingston, Ontario youth (*Kenny & Moore, 2013*)

1. Area of study:

- Health (mental, social, physical)
- gaps in curriculum
- adolescents (perceptions & knowledge)

2. Central Research Question:

What are the social determinants of health?

How aware are adolescents of social determinants of health?

Where is the gap in this knowledge?

3. Possible Hypotheses:

That there are gaps in the curriculum that result in unawareness of social determinants of health, among adolescents.

The majority of adolescents are unaware of social determinants of health, but are knowledgeable of physical determinants of health.
